Problem 1 - Family doctor – patient

Statement

A software program is needed to be developed for patient management of a family doctor.
The program will allow:
a) adding a new patient (cnp, name, address);
b) adding of a new consultation for a patient (consultation date, diagnostic, prescription drugs);
c) listing all the patients that have a certain disease, in descending order by the number of consultations in the last year.

To do
- Design and implement a Java application for the given statement problem.
